

MULTI-FAMILY SOLUTIONS 2017|2018

We make the difference for multi-family professionals.

We offer our innovations in a breadth of styles and finishes that can realize the vision of your design, construction or facility team and fit the look of any multi-family housing. And our product warranties and sales force make your job easier by providing support before, during and after construction. In the end, your tenants will receive a distinctive experience that enhances their interactions with water, transforms their daily lives—and helps your housing stand apart.

We lead our industry in identifying and meeting consumer needs—creating new styles and finishes for faucets and accessories, and inventing innovative technologies that capture clients' imaginations.

Raising tenants' expectations while lowering water use.

As industry leaders in sustainability, we're constantly exp new ways to minimize water usage-without diminishing rejuvenating experience our products provide.

WaterSense[®] Sustained Excellence Award.

To protect and conserve our nation's water supply, we have long partnered with the EPA WaterSense Program. Honored as the EPA's Manufacturer Partner of the Year in 2011, 2013 and 2014, we are profoundly proud of being named a two-time WaterSense Sustained Excellence Award Winner—first in 2015 and again in 2016.

At present, more than 80% of Delta[®] bath suites feature showerheads and handshowers that meet WaterSense requirements—using 20-40% less water than the industry standard.* Our WaterSense-labeled lavatories use 32% less* water, while performing as well or better than their less-efficient counterparts. Moreover, many of our products meet California's stringent Title 20 water-efficiency standards.

*Based on flow rate for showerheads and handshowers of 1.5 gpm or 2.0 gpm versus Industry Standard ASME A112.18.1/CSA B125.1 of 2.5 gpm; and flow rate for lavatory faucets of 1.2 gpm versus Industry Standard ASME A112.18.1/CSA B125.1 of 2.2 gpm.

Innovations that make tenants' experiences more memorable.

H₂Okinetic[®] Showers.

The feeling of more water. Without using more water. H2Okinetic Showers sculpt water into a unique wave pattern that delivers more warmth, more intensity and 3X the coverage*—all while saving water. It's a drenching, spa-like experience tenants will enjoy and stay for.

*Coverage measured in accordance with EPA WaterSense® Specification for Showerheads, March 4, 2010.

Touch₂O[®] and Touch₂O_{.xt[®]} Technologies.

Sometimes, their hands could use a hand. Touch₂O Technology starts water flowing with a light tap anywhere on the spout or handle. Touch₂O_{.xt} Technology starts the water when hands get within four inches of the product, and stops when hands are removed. Both technologies bring convenience to your tenants, and are ADA-compliant.

MultiChoice[®] Universal Valve.

Get maximum flexibility with minimum effort. Installing the Delta® MultiChoice Universal Valve makes it easier to upgrade style and functionality later, without changing plumbing behind the wall. A high-flow rough for shower-only configurations adds even more flexibility, while a refined temperature limit stop allows more precise settings for greater tenant comfort.

MagnaTite[®] Docking.

Stays put every time. With its powerful integrated magnet, Delta MagnaTite docking snaps spray wands precisely into place for easy, smooth docking every time. The firm hold of the magnet prevents drooping for a lasting picture-perfect look, but comes free with a gentle tug to give tenants complete flexibility.

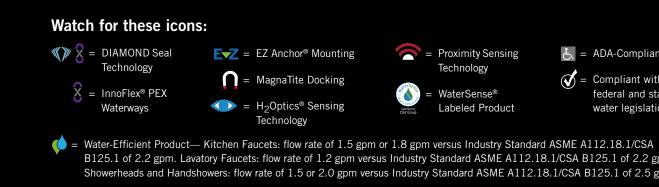

DIAMOND[™] Seal Technology.

Innovation and reliability in one convenient box. Delta faucets with DIAMOND Seal Technology perform like new for life with a patented design which reduces leak points, is less hassle to install and lasts twice as long as the industry standard.*

*Industry standard is based on ASME A112.18.1 of 500,000 cycles.

Proximity[®] Sensing Technology.

The next generation in hands-free functionality. Proximity Sensing Technology makes Delta electronic faucets the most responsive in the industry. The entire faucet body acts as a sensor, activating water flow when users approach and stopping once their hands are removed. And the lack of an exposed sensor reduces the risk of sensor damage from vandalism or cleaning products.
